EMERGENCY BACKUP Option

EMERGENCY BATTERY BACKUP (-EM)

FPNB series emergency backup models works out of the box to save time and cost in the installation. When there is a power outage, the emergency backup driver and battery will power the FPNB to an reduced brightness of 1,000 lumen for at least 90 mins.

CONTROL Options

Passive Infrared Bi-level Motion and Daylight Sensor Control (option: -MC)

A PIR sensor can detect changes in the amount of infrared radiation impinging upon it, which varies depending on the temperature and surface characteristics of the objects in front of the sensor. Its signature 3-step dimming function is perfect for areas that require a light change notice totally switching off the light. Daylight harvesting function also reduces electric light in building interiors when daylight is available. Control parameters are adjustable by an optional wireless commissioning device.

- Fixture integral
- PIR motion
- Daylight threshold
- Daylight harvesting
- Wireless configurable

Optional wireless commissioning device can be purchase separately to customize settings.

Networked Lighting Controls (option: -WBP)

Network Lighting Controls (NLC) offer Luminaire Level Lighting Control (LLLC) based on Bluetooth-enabled Mesh Networking of Luminaires. Individual addressability enables luminaires to be communicated with each other within the zone/network. Luminaires can be grouped, trim and controlled by using the smart device app or connected wall switches. Scheduling, scene and sensors can be added for automation among the lights within the zone/group.

- **(-WBP)** Wireless bluetooth networked control with PIR occupancy and daylight harvesting sensor

iOS/Andriod APP will be used to commissioning or customize settings
